

Time Tracker

TimeTracker™

McCartney Multimedia, Inc., is proud to announce its new software back office component called TimeTracker.

What is TimeTracker ?

TimeTracker is an online, real-time log for tele-commuters, designers, contract workers, lawyers, or anyone else who works on multiple projects on an hourly basis. TimeTracker generates Billing as well as Payroll reports – separated by security levels of access, and exports them to Excel format. No special software required.

With TimeTracker you can:

- Issue your operators usernames and passwords
- Track operator costs daily
- Track job budgets daily
- Enter different Operator and Client billing rates – neither can be viewed by the other
- Receive automated email alerts when jobs reach a pre-defined percentage of the bid
- Create an extensive client / operator / job number list
- Generate operator costs and client billing reports and download them directly into Excel

Ideal for small business CEOs and accountants who need to view client/job profitability on the fly.

Flagged Jobs feature:

TimeTracker will let you know when you've reached 50% of billable hours against the total budget of a job.

In short, TimeTracker is ideal for large or small work groups, independent contractors and remote personnel.

Time IS money so save some of both...subscribe to TimeTracker today !
